Brickloop brand essentials

Identity, client communication and the evidence behind a confident decision.

A working kit for residential advisory, land and development transactions, leasing and integrated real estate advisory.

Positioning and voice

The brand should make the quality of the assessment visible.

Brickloop Advisors helps homebuyers, investors, landowners, developers and businesses assess property opportunities, understand their risks and move from evaluation to execution.

The promise

A property earns the client's YES through evidence. The recommendation may be to proceed, negotiate, wait or decline.

The name and mark

The brick suggests structure and the physical asset. The loop suggests continuity across assessment, transaction and relationships. This is the adopted visual rationale.

How we sound

Specific, calm and commercially literate. State the source, the implication and the next step. Use qualified language when evidence is incomplete.

What to avoid

Unsupported superlatives, artificial urgency, guaranteed returns and blanket claims of clearance. Describe specialist work accurately.

Caption: Not Every Property Deserves Your YES. Keep this wording and capitalisation in standard brand lockups.

Logo architecture and usage

Use the supplied artwork. The custom wordmark is not a typeset font.

Clear space

H = the height of the brick B. Keep at least 1H around standard lockups. Tight header assets rely on surrounding layout padding to restore that space.

Minimum artwork widths

Horizontal: 180px / 40mm. With caption: 440px / 100mm. Stacked with caption: 340px / 80mm. Use the dedicated B icon below those sizes.

Do not alter

Do not stretch, redraw, retype or recolour individual letters. Keep the OO crossing open. Use the flat version for small reproduction.

Micro-icon exception: supplied favicon and avatar compositions use dedicated padding and simplified geometry. Print minima require a proof on the final substrate.

Primary colour system

Gold is an accent. Dark text and light reading surfaces carry the information.

Signature gold

#C6A15B

RGB (198, 161, 91)

Brand black

#0B0B0B

RGB (11, 11, 11)

Reading surface

#FAF8F3

RGB (250, 248, 243)

Secondary text

#5C5C5C

RGB (92, 92, 92)

Recommended balance

Reports use predominantly white or off-white. Reserve black covers and gold emphasis for titles, brand moments and selected key information.

Production roles

White #FFFFFF is the neutral canvas. Light grey #D9D9D9 separates tables. Border grey #767676 defines form controls. Use approved text pairings on the next page.

Functional colours and contrast

Evidence status and risk severity are different fields. Always include a text label.

Use	Text / background	Contrast	Normal text
Body text	#0B0B0B / #FAF8F3	18.55:1	AAA
Secondary text	#5C5C5C / #FAF8F3	6.30:1	AA
Brand accent on dark	#C6A15B / #0B0B0B	8.11:1	AAA
Primary button	#0B0B0B / #C6A15B	8.11:1	AAA
Verified evidence	#256344 / #EAF4EE	6.34:1	AA
Pending evidence	#805900 / #FFF3D6	5.69:1	AA
Risk labels	#9C302A / #FBE9E7	6.24:1	AA
Estimates	#535B67 / #EDF0F3	6.00:1	AA

Gold on white is decoration only. Ratios assess text contrast, not complete WCAG conformance.

One editorial type family

DejaVu Sans Regular and Bold are supplied with their licence. The logo remains separate custom artwork.

Evidence before persuasion

A clear recommendation, supported by a traceable source.

Use	Working specification	Weight
Deck title / slide title	48pt / 31.5pt	Bold
Deck body / table text	18pt / 15.75pt	Regular
Report title / headings	27pt / 19pt / 13pt	Regular / Bold
Report body / table text	10.5pt / 9pt	Regular
Web body / labels	16px / 14px	Regular / Bold

Typesetting and fallbacks

Use hierarchy through size, spacing and weight. Keep the number of styles small.

Headlines

Use sentence case. Keep all-caps labels short. Default to left alignment for reading. Avoid narrow columns of justified text.

Spacing

Body line height: 1.45 to 1.6 on web, 1.18 in the Word templates. Use an 8px web spacing rhythm and visible separation between sections.

Tagline

Use the supplied outlined lockup when the caption accompanies the logo. Standalone caption text preserves the exact wording and capitalisation. Never squeeze it to fit.

Numbers and units

Write area units, currency and date explicitly. Label gross versus net, asking versus transacted and estimate versus verified. Align comparison columns consistently.

Digital fallback

Web: self-hosted DejaVu Sans, then Arial, Helvetica, sans-serif. Email: Arial, Helvetica, sans-serif. Templates: install the supplied TTF files before editing.

Long-form reading

Use dark body copy on a light surface. Avoid gold paragraphs. If font substitution changes wrapping, adjust the layout and re-export before sending.

Evidence presentation rules

Verification belongs to a claim. It never automatically clears an entire property.

Label	Meaning	Required record
VERIFIED	Specific claim checked by a named reviewer	Source / date / reviewer / method / limits
OWNER-PROVIDED	Information from an owner or representative	Original communication / name / date
ESTIMATE	Result dependent on assumptions	Inputs / model / date / sensitivity
PENDING	Evidence or review remains incomplete	Missing item / responsible person / due date

Risk severity

HIGH / MEDIUM / LOW. Write the label and describe the consequence, mitigation, owner and remaining exposure.

Recommendation

PROCEED / PROCEED WITH CONDITIONS / HOLD / DECLINE. Link the recommendation to the client objective and specific evidence.

Photography and imagery

Show the property clearly. Visual treatment must preserve material facts.

Architecture

Use straight verticals, natural light and uncluttered framing. Prefer accurate material colour and restrained contrast. Avoid exaggerated wide-angle distortion.

Land and access

Include the approach, frontage, boundary context and constraints. Keep site date, orientation and source. Show actual conditions without removing obstructions.

Maps and plans

Use licensed sources. Label north, access, boundaries and scale where known. State when a boundary or alignment is indicative rather than surveyed.

People

Use natural expressions and neutral backgrounds. Seek permission for identifiable client imagery. Avoid excessive retouching or staged claims of endorsement.

Renders and proposals

Label proposed architecture and artist impressions. Never use generated or staged imagery as proof of a completed project or existing condition.

Cropping and grading

Keep a neutral grade with realistic greens and earth tones. Place the logo on a clear solid area. Never crop out a fact that changes the property assessment.

Client communication templates

Choose the format according to the decision the reader needs to make.

Format	Use	Editing rule
Property one-pager	First qualified introduction	One page, current terms and unresolved checks
Client presentation	Meeting and commercial discussion	Duplicate only the relevant layouts
Property assessment	Documented review and recommendation	Retain evidence trail and scope boundaries
Letterhead	Formal correspondence	Keep subject, reference, recipient and action clear

Evidence in the deck

Use editable native tables. Record sources and dates on the relevant slide. Keep supporting detail in the report or annexure.

Before release

Replace bracketed fields. Check units, status labels, assumptions, permissions and commercial validity. Export a dated PDF for circulation.

Social identity and publishing

Use consistent recognisable assets, then let the evidence carry the message.

Profile image

Use the B avatar on LinkedIn, Instagram and WhatsApp Business. The mark sits within a circular crop-safe area.

Headers

Company canvas: 1128 x 191. Profile canvas: 1584 x 396. Generic brand header: 1600 x 900. Preview the actual platform crop before saving.

Editable social layouts

Square 1080 x 1080 and portrait 1080 x 1350. Each has insight, property assessment and transaction case-study layouts.

Publication checks

Use a source and date. Obtain consent for identifying clients. Distinguish a live opportunity from a completed transaction. Remove every placeholder.

Website and email applications

The website kit provides reusable styles for the existing site.

Navigation and logos

Use the light or dark header asset to match the background. Preserve the aspect ratio and surrounding space. On small screens, use the wordmark without the tagline.

Buttons and forms

Primary action: dark text on gold. Keep visible labels, keyboard focus and explicit validation messages. A form success message must follow a confirmed backend response.

Icons

Use favicon.svg or favicon.ico for the browser and apple-touch-icon.png for device shortcuts. Optional app icons and manifest are included for implementation needs.

Email signature

Use live text for name, phone and email. The signature remains readable when images are blocked. Test it in the actual email client before rollout.

The supplied website is a component preview. It sends no callback requests, changes no CRM records and does not deploy over the existing site.

Print and asset production

Retain editable masters and produce exports for the actual output process.

Purpose	Preferred file	Production note
Editable design	SVG / PPTX / DOCX	Keep original paths, fonts and native tables
Screen / web	SVG / PNG / supplied CSS	Use SVG for scaling; export raster to actual size
Document circulation	PDF	Check page flow and export after final edits
Physical printing	Vector PDF	Agree stock, colour profile and proof with printer

Gold on paper

RGB gold simulates the colour. A printer must choose and proof ink or foil on the selected stock. No universal CMYK formula or unverified Pantone match is specified.

Master integrity

Keep a dated approved master. Avoid repeated screenshot exports. SVG is the editable vector source. Supply AI or EPS only if a vendor specifically requires it.

Ownership and rollout

A small set of approved assets prevents inconsistent client-facing material.

Folder	Contents
01_Brand_Rules	Guide, colour/type sheets, tokens and palette
02_Logos	SVG, vector PDF and high-resolution PNG masters
03_Client_Templates	Presentation, report and property one-pager
04_Stationery	Letterhead and email signatures
05_Social	Editable cards, avatars and banners
06_Web_Kit / 07_Fonts	Components, device icons and licensed fonts
08_Evidence	Status rules and source-record conventions

Assign one approver for brand changes. Keep old versions archived. Review assets when services, contact details or the website change.
